

Table 3: number of species in each IUCN Red List Category by kingdom and class.

IUCN Red List Categories: **EX** - Extinct, **EW** -Extinct in the Wild, **CR** - Critically Endangered (includesCR(PE) and CR(PEW)), **EN** - Endangered, **VU** - Vulnerable,**LR/cd** - Lower Risk/conservation dependent, **NT** - NearThreatened (includes **LR/nt** - Lower Risk/near threatened), **DD**- Data Deficient, **LC** - Least Concern (includes **LR/lc** -Lower Risk/least concern).

CR(PE) & CR(PEW): The tags 'Possibly Extinct' and'Possibly Extinct in the Wild' have been developed to identify CRspecies that are likely already extinct (or extinct in the wild), butrequire more investigation to confirm this. NOTE that these are notIUCN Red List Categories; they are tags that can be attached to theCR category to highlight those taxa that are possibly extinct. Theyare included in the above table to indicate a plausible upperestimate for number of recently extinct species on The IUCN Red List.
